

## 2003-2004 Seat Bumper Modification to Accommodate Factory Windbreak

The 2005-2006 SSR seat bumpers are slightly different than the 2003-2004. They have a cutout (about 2" wide and 0.100" deep) under the inboard mounting area to accommodate installing the Factory Windbreak.

Please Note that this is **ONLY** on the inboard mount.

You will be slicing out this area on your seat bumpers. Start by placing a piece of 1" wide masking tape through the center of the mount hole. Be sure it is perpendicular to the straight part of the bumper.

Add a second piece of 1" masking tape, parallel to the first one.

Add another piece of tape on each side of the two existing tapes. This will be the outer border of your cuts.

Remove the two center pieces of tape and you are ready to cut the channel for the Windbreak bracket to fit into. Your seat bumper will look like this when you start cutting.

You may have noticed that the camera is also catching the 05-06 bumper in the background..... Measure your opening again to be sure you are cutting approximately 2" out.

Slice out a 0.100" deep section from each seat bumper and remount the bumpers. You're done.

Call if you need re-assurance.
